PROJECTS

Book Search Engine

MongoDB, Express,
React, Node.js, Heroku

Purpose: Readers can search for new books to read & keep a list of books to purchase.

- Designs an Apollo Server that uses GraphQL queries and mutations to fetch and modify data, replacing the existing RESTful API.
- Modifies the existing authentication middleware to work in the context of a GraphQL API.
- Creates an Apollo Provider which requests can communicate with an Apollo Server.

InterActor

MongoDB, Express,
React, Node.js, Heroku

Purpose: Viewers can find movies that actors/actresses have made together.

- Designed front-end with materialize, that consists through React.
- Back-end uses MongoDB to facilitate sign-in/out function along with saving, updating, deleting, creating user favorite list.
- Uses API calls to retrieve, use, and manipulate data points, which is then displayed on cards.
